

## **Task 2 (HTML)**

Make a web site consists of the following 3 pages and apply your own style sheet for these pages.

### **Page 1 (Home Page)**

This page should include an image that links to the main page (page 2), if the user didn't click the image, he will be redirected automatically to page3 within 3 seconds.

## Page2

### header1

#### header2

#### header3

---

content

- first item
- second item
  - I. first category
  - II. second category
  - III. third category
  - IV. fourth category
- third item
- fourth item

---

here many text formatted can be added like

1. **bold**
2. underlined
3. *italic*
4. Different fonts
5. different size and
6. different colors

[top](#)

[next](#)

You should use

- 1) different heading (h1,h2,h3...h6).
- 2) different formatting (bold, underline, italic, coloring the texts...).
- 3) use ordered list , unordered list and nest them together.
- 4) Top links to the top of the page.
- 5) Next links to page 3.

## **Page3**

[search google](#)

- The image at the top is an image map...
- Each pillow area should link to the corresponding website in another browser window, the rest part should link to the site you are developing now, and should open in the same browser window.
- The image at the end of the page is linkable to send an email to web owner.
- "Search Google" link should open Google website.
